

AHMED MOSTAFA HUSSEIN

SOC ANALYST | CYBERSECURITY ANALYST

Egypt, Cairo | a7medmostafa7777@gmail.com | +20 1000240832

LinkedIn: www.linkedin.com/in/ahmedmostafahusseini | GitHub: <https://github.com/ahmedmostafa>

SUMMARY:

Emerging cybersecurity professional specializing in Security Operations Center (SOC) analysis, network defense, and cyber threat management. Leverages a comprehensive portfolio of industry certifications and practical experience in enterprise firewall administration to safeguard critical infrastructure. Proficient in utilizing SIEM platforms, Intrusion Detection Systems (IDS), and continuous network traffic analysis to proactively detect anomalies and mitigate vulnerabilities. Actively seeking an entry-level SOC Analyst position to contribute robust incident response capabilities and a commitment to continuous security enhancement within a dynamic organizational environment.

EDUCATION:

Bachelor of Computer Science at Modern Academy , Cairo, Maadi September 2022 - May 2026
Grade: 3.3/4.0 (Excellent)

EXPERIENCE & INTERNSHIPS:

Network Security Intern (Firewall Fortinet & Sophos) at IT Gate Academy, Cairo, Nasr city June 2024 - August 2024

- Gained practical, hands-on experience in configuring, deploying, and managing enterprise firewalls, specifically focusing on Fortinet and Sophos environments.
- Configured security policies, NAT rules, and VPN tunnels in lab environments to secure network perimeters.
- Monitored firewall logs to identify unauthorized access attempts and traffic anomalies.

Network Engineering Intern (CCNA Training) at IT Gate Academy, Cairo, Nasr city June 2023 - August 2023

- Developed foundational networking skills, including routing, switching, and network infrastructure fundamentals.
- Configured VLANs, OSPF, and static routing protocols within lab environments.
- Utilized Cisco Packet Tracer to design, simulate, and troubleshoot network topologies.

PROJECTS:

AI-Powered Cybersecurity Lab — Multi-Layer Network Defense System • GitHub

Designed and validated a fully automated, multi-layer network defense system integrating machine learning, intrusion detection, and automated firewall mitigation with zero human intervention.

- Built a realistic enterprise network (GNS3 + VMware): 4 LAN zones, OSPF-routed Cisco backbone, VLAN segmentation, pfSense firewall
- Captured a custom 80,000-sample labeled dataset using Scapy from real attack tools (Nmap, Hydra, Metasploit, Slowloris, hping3)
- Trained an XGBoost classifier achieving 98.94% accuracy across 8 attack categories, benchmarked against Random Forest and Logistic Regression
- Built a 4-layer detection engine (XGBoost + Suricata IDS + Zeek + rule-based heuristics) with a 3-tier confidence escalation framework
- Implemented autonomous SSH-driven pfSense blocking, achieving a 100% detection/mitigation rate across 240 live attack trials with a Mean Time To Mitigation of 872 ms
- Engineered 27 temporal, volumetric, and flag-based flow features and achieved real-time inference at 11,200 samples/sec (0.089 ms/sample), enabling inline classification at line rate

Tech stack: Python, XGBoost, Scikit-learn, Scapy, Suricata, Zeek, pfSense, GNS3, VMware, Cisco IOS

SKILLS:

Technical Skills:

Core Competencies: Security Operations Center (SOC) Analysis, Incident Response, Vulnerability Assessment, Network Defense, Ethical Hacking.

Tools & Technologies: SIEM, Intrusion Detection Systems (IDS), Wireshark, OpenVAS, Metasploit, Fortinet, Sophos.

Systems & Scripting: Linux (System Administration), Kali Linux (Penetration Testing), Python (Security Automation & Scripting), SQL (Database Management & Querying).

Soft Skills: Analytical Thinking, Problem-Solving Under Pressure, Attention to Detail, Self-Directed Learning, Team Collaboration, Technical Documentation & Reporting

LANGUAGES:

Arabic - Native

English - Proficient
